

AMENDMENTS TO THE CLAIMS

The following is a complete, marked-up listing of revised claims with a status identifier in parenthesis, underlined text indicating insertions, and strike through and/or double-bracketed text indicating deletions.

LISTING OF CLAIMS

1. (Currently Amended) A method of automatically disinfecting or sterilizing at least a portion of any of a resting, a milking, or a feeding station provided with an animal identification device and located in an area, in which milking animals are allowed to move, wherein each of said milking animals visiting said any of a resting, a milking, or a feeding station is identified, wherein said method comprising the steps of:

- retrieving information regarding the health of each of said milking animals entering said any of a resting, a milking, or a feeding station;

-ascertaining the health of each said milking animal based on the retrieved information;
[[and]]

-automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station [[if]] when it is ascertained ~~said retrieved information reveals~~ that a milking animal entering said any of a resting, a milking, or a feeding station has an infection that is capable of being transmitted to other milking animals, the disinfection or the sterilization being performed after that said infectious milking animal has left said any of a resting, a milking, or a feeding station, ~~wherein;~~ and

- preventing ~~[[no]]~~ further milking animals ~~are admitted to~~ from entering said any of a resting, a milking, or a feeding station until the disinfection or the sterilization has been performed.

2. (Previously Presented) The method of claim 1 wherein

- said any of a resting, a milking, or a feeding station is connected to a computer, which holds a database with information of said milking animals and their health; and

- said step of retrieving information is performed by means of referring to said database.

3. (Original) The method of claim 2 wherein said information regarding the health of said milking animals is entered manually into said database; or is entered automatically from a computer-connected measuring device for measuring a health-related parameter of said milking animals.

4. (Previously Presented) The method of claim 1 wherein

- a health-related parameter of each of said milking animals is measured by means of a measuring device connected to said any of a resting, a milking, or a feeding station; and

- said step of retrieving information is performed by means of referring to said measuring device.

5. (Currently Amended) The method of claim 1, wherein said step of automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station is performed irrespective of said information retrieved if the time elapsed since said at least a portion of any of a resting, a milking, or a feeding station was last disinfected or sterilized is above a threshold value.

6. (Previously Presented) The method of claim 5 comprising:

- retrieving information regarding the health of each of said milking animals in said area; and

- setting said threshold value depending on the percentage of said milking animals in said area that have an infection capable of being transmitted to other milking animals, where said percentage is deduced from said information retrieved regarding the health of each of said milking animals in said area.

7. (Currently Amended) The method of claim 1, wherein said step of automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station is performed irrespective of said information retrieved if it is established that no milking animal visits, or is to visit, said any of a resting, a milking, or a feeding station.

8. (Currently Amended) The method of claim 1, wherein said step of automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station is performed by means of exposing said at least a portion of any of a resting, a milking, or a feeding station to any of heat, radiation, or a chemical.

9. (Currently Amended) The method of claim 8 wherein said step of automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station comprises the step of flushing said at least a portion of any of a resting, a milking, or a feeding station with a hot fluid.

10. (Currently Amended) The method of claim 8 wherein said step of automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station comprises the step of irradiating said at least a portion of any of a resting, a milking, or a feeding station with UV light.

11. (Currently Amended) The method of claim 1, wherein said at least a portion of any of a resting, a milking, or a feeding station includes surfaces of said any of a resting, a milking, or a feeding station, which an animal visiting said any of a resting, a milking, or a feeding station may contact for a specified purpose or accidentally.

12. (Currently Amended) The method of claim 1, wherein

- said any of a resting, a milking, or a feeding station includes a milking station; and

- said at least a portion thereof includes a respective teat receiving opening of each teat cup of the milking station; a respective teat receiving opening of each teat cleaning cup of the milking station, if any; teat cleaning brushes of the milking station, if any; a front portion of a robot arm of the milking station; and a manger of the milking station.

13. (Currently Amended) The method of claim 1, wherein

- said any of a resting, a milking, or a feeding station includes a feeding station; and
- said at least a portion thereof includes surfaces of a manger of the feeding station.

14. (Currently Amended) The method of claim 1, wherein

- said any of a resting, a milking, or a feeding station includes a resting station; and
- said at least a portion thereof includes a floor of the resting station.

15. (Currently Amended) The method of claim 1, wherein

- said any of a resting, a milking, or a feeding station includes each station located in said area that is provided with an animal identification device; and
- said at least a portion thereof includes all surfaces of each station an animal in said area may contact for a specified purpose or accidentally.

16. (Currently Amended) A device for automatically disinfecting or sterilizing at least a portion of any of a resting, a milking, or a feeding station provided with an animal identification device and located in an area, in which milking animals are allowed to move, wherein each of said milking animals visiting said any of a resting, a milking, or a feeding station is identified, ~~wherein~~ comprising:

- a processing and control device adapted to retrieve information regarding the health of each of said milking animals entering said any of a resting, a milking, or a feeding station; and
- a disinfecting or sterilizing apparatus capable of automatically disinfecting or sterilizing said at least a portion of any of a resting, a milking, or a feeding station, said disinfecting or sterilizing apparatus being connected to said processing and control device, wherein
- said processing and control device is adapted, provided that said information retrieved reveals that a milking animal entering said any of a resting, a milking, or a feeding station has an infection that is capable of being transmitted to other milking animals, to control said disinfecting or sterilizing apparatus to automatically disinfect or sterilize said at least a portion of any of a resting, a milking, or a feeding station after that said infectious milking animal has left said any of a resting, a milking, or a feeding station, and before further milking animals are admitted to enter said any of a resting, a milking, or a feeding station.

17. (Original) The device of claim 16 wherein said processing and control device holds a database with information regarding the health of each of said milking animals entering said any of a resting, a milking, or a feeding station, which information said processing and control device is adapted to retrieve.

18. (Previously Presented) The device of claim 17 wherein

- said processing and control device is connected to a measuring device for measuring a health-related parameter of said milking animals, and

- said processing and control device is adapted to retrieve said information regarding the health of each of said milking animals entering said any of a resting, a milking, or a feeding station in the form of said health-related parameter.

19. (Previously Presented) The device of claim 16 comprising

- a measuring device for measuring a health-related parameter of said milking animals, wherein

- said processing and control device is adapted to retrieve said information regarding the health of each of said milking animals entering said any of a resting, a milking, or a feeding station in the form of said health-related parameter.

20. (Currently Amended) The device of claim 16, wherein said processing and control device is adapted to control said disinfecting or sterilizing apparatus to automatically disinfect or sterilize said at least a portion of any of a resting, a milking, or a feeding station irrespective of said information retrieved if the time lapsed since disinfection or sterilization was last performed by said apparatus is above a threshold value.

21. (Previously Presented) The device of claim 20 wherein said threshold value is set depending on the percentage of said milking animals in said area that have an infection capable of being transmitted to other milking animals.

22. (Previously Presented) The device of claim 16 wherein said processing and control

device is adapted to control said disinfecting or sterilizing apparatus to automatically disinfect or sterilize irrespective of said information retrieved if no milking animal visits, or is to visit, said any of a resting, a milking, or a feeding station.

23. (Previously Presented) The device of claim 16 wherein said disinfecting or sterilizing apparatus is any of a heat supply apparatus, a chemical supply apparatus, or a radiation exposure apparatus.

24. (Currently Amended) The device of claim 23 wherein said disinfecting or sterilizing apparatus is an apparatus for flushing said at least a portion of any of a resting, a milking, or a feeding station with a hot fluid.

25. (Currently Amended) The device of claim 16 wherein said at least a portion of any of a resting, a milking, or a feeding station includes surfaces of said any of a resting, a milking, or a feeding station, which an animal visiting said any of a resting, a milking, or a feeding station may contact for a specified purpose or accidentally.
